Caution

1. This Kyocera LCD module has been specifically designed for use only in electronic devices in the areas of audio control, office automation, industrial control, home appliances, etc. The modules should not be used in applications where module failure could result in physical harm or loss of life, and Kyocera expressly disclaims any and all liability relating in any way to the use of the module in such applications.

2. Customer agrees to indemnify, defend and hold Kyocera harmless from and against any and all actions, claims, losses, damages, liabilities, awards, costs, and expenses, including legal fees, resulting from or arising out of Customer's use, or sale for use, of Kyocera modules in applications.

3. Kyocera shall have the right, which Customer hereby acknowledges, to immediately scrap or destroy tooling for Kyocera modules for which no Purchase Orders have been received from the Customer in a two-year period.

1. Application

This data sheet defines the specification for a (640×R.G.B)×480 dot, STN Transmissive color dot matrix type Liquid Crystal Display with CFL backlight.

2. Construction and Outline

(640×R.G.B)×480 dots, COG type LCD with CFL backlight.

Backlight system   : CFL (2 tubes).

Inverter   : Option
                       Recommended Inverter : CXA-0217 (TDK)
                                                 (Old Part Number : CXA-P1212-VJL)
                       or equivalent

Polarizer   : Glare treatment.

Additional circuit : Bias voltage circuit, Randomizing circuit, DC-DC Converter

Touch Panel   : Analog type. Non-Grare treatment.

This drawing is showing conception only.

Power consumption	Pdisp		—	(310)	(400)	mW

*1 Maximum contrast ratio is obtained by adjusting the LCD supply voltage (Vop= VCONT) for driving LCD.

*2 In consideration of display quality, it is recommended that frame frequency is set in the range of 70-80Hz. When you have to use higher frame and clock frequencies, confirm the LCD's performan -ce and quality prior to finalizing the frequency values:
Generally, as frame and clock frequencies become higher current consumption will get bigger and display quality will be degraded.

*3 Display high frequency pattern, (see below).
VDD = 5.0V , Vop = VCONT , f FRM = 75 Hz , fcp = 8.68MHz, Temp = 25℃
Pattern:

* We recommend that you should set 1/482 duty so as to get high LCD's display quality.

Optimum contrast is obtained by adjusting the LCD driving voltage(Vop) while at the viewing angle of $\theta = \phi = 0°$.
6-1. Contrast ratio is defined as follows:

$$CR = \frac{\text{Brightness at all pixels "White"}}{\text{Brightness at all pixels "Black"}}$$
6-2. Definition of Vop
6-3. Definition of response time
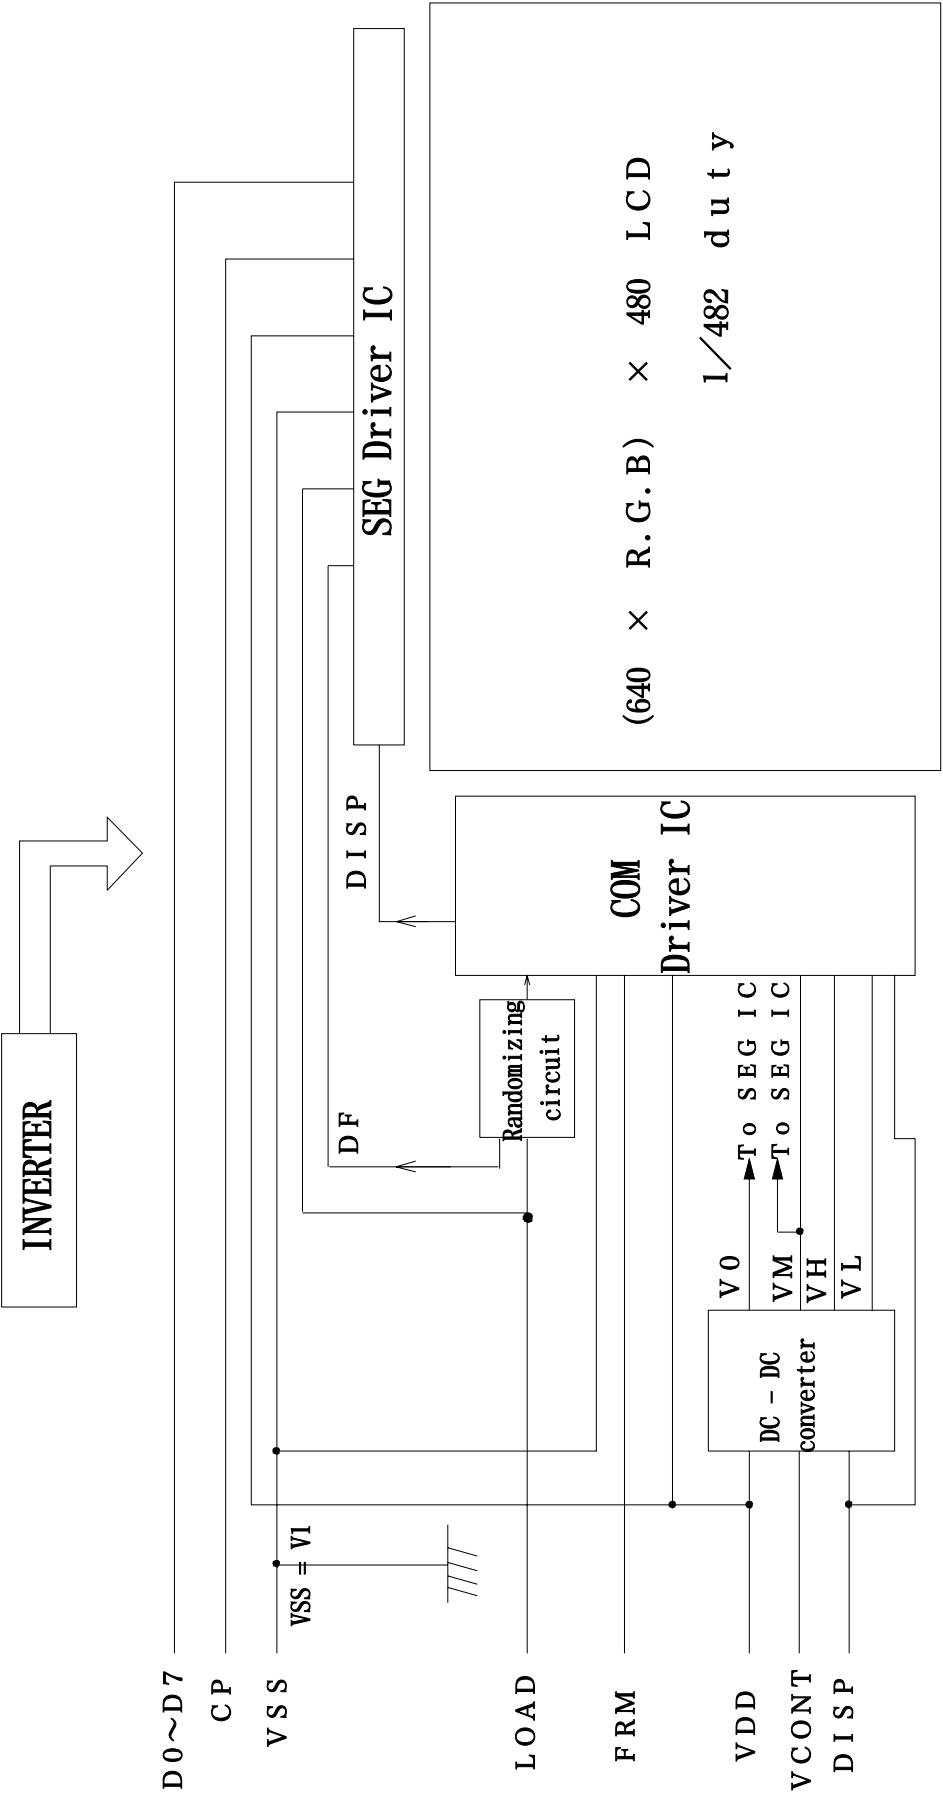

6-4. Definition of viewing angle

(θ direction)

(φ direction)

6-5. Measuring points

1) Rating is defined as the average brightness inside the viewing area.

2) 30 minutes after CFL is turned on. (Ambient Temp.=25℃)

3) The inverter should meet the eccentric conditions;
   -Sine, symmetric waveform without spike in positive and negative.

＊2 LOAD Cycle is const.

12. Supply Voltage Sequence Condition

DO NOT apply DC voltage to the LCD panel. DC voltage induce irreversible electrochemical reactions and reduce LCD life. Always follow the power supply ON/OFF sequence of VDD first, input signal second, VCONT third and finally DISP. This will prevent DC driving of the LCD or CMOS LSI latch up as shown below.
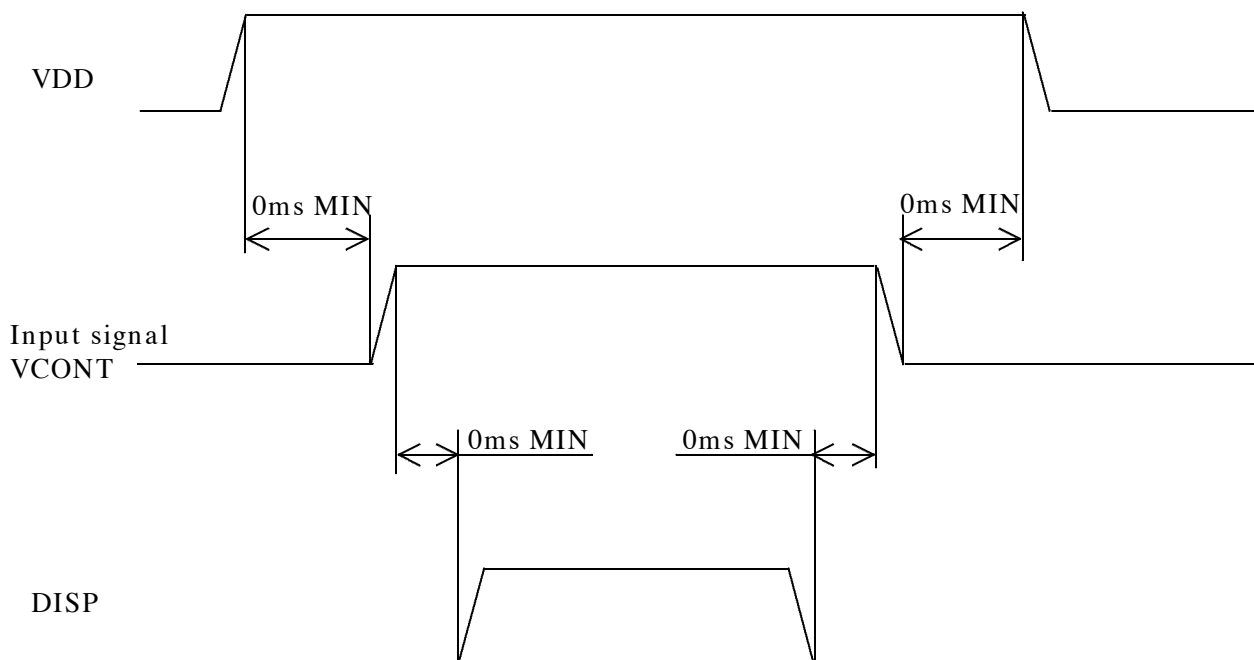

* Input signal : CP,LOAD,FRM,VCONT,D0～D7

* The above sequence should be designed as to keep each normal figure on condition that liquid crystal module is loaded on your system.

* Control the input signal and VCONT to the above ON - OFF timing when you switch ON/OFF the display during VDD and DISP are on.
And design the circuit as VCONT's OFF level become GND level at the some time.

* Control the supply voltage sequence not to float all signal line when the LCD panel is driving.

１３．Backlight Characteristics

ITEM	SYMBOL	MIN.	TYP.	MAX.	NOTE

Operating frequency	F	(40)　kHz	―	(100)　kHz	―

*1　The Non-load output voltage (VS) of the inverter should be designed to have some margin,
　　because VS may increase due to the leak current which may be caused by wiring of CFL cables.
　　(Reference value: (1,430) Vrms. Min)

*2　We recommend that you should set the discharging tube current at lower than typical value
　　so as to prevent the heat accumulation of CFL tube from deteriorating a performance of the LCD.

*3　Do not apply more than (6.0)mA discharging tube current. Because CFL maybe broken due to over
　　current.

*4　When the illuminance or quantity of light has decreased to 50 % of the initial value.
　　Average life time of CFL will be decreased when LCD is operating at lower and higher temperature.

*　　The inverter should meet the eccelentic conditions : sine, symmetric waveform without spike in
　　poitive and negative.

14. Design Guidance for Analog Touch-Panel(T/P)

14-1. Electrical
In customer's design, please remember the following considerations.

1. Do not use the current regulated circuit.
2. Keep the current limit with top and bottom layer.(See Sec, 4-1)
3. Analog T/P can not sense two point touching separately.
4. A contact resistance is appeared at the touch point between top and bottom layer.
   After this resistance has stable read the T/P position data.
5. Analog T/P is also a "Capacitor" in an equivalent circuit.
   Design your sensing circuit and low-pass filter with considering this "Capacitor" value.
6. Because noise of inverter or peripheral circuits may interfere signal of touch panel itself
   it is necessary to design carefully in advance to avoid these noise problem.

14-2. Software
1. Do the "User Calibration".
2. "User Calibration" may be needed with long term using.
   Include "User Calibration" menu in your software.
3. When drawing a line with a stylus, there may be a slight discontinuity when the stylus passes
   over a spacer-dot. If necessary, please provide a compensation feature within your software.
14-3. Mounting on display and housing bezel
1. Do not use an adhesive tape to bond it on the front of T/P and hang it to the housing bezel.
2. Never expand the T/P top layer (PET-film) like a balloon by internal air pressure.
   The life of the T/P will be extremely short.
3. If a dew will be on the heat-sealed area or exposed traces at the end of a flexible tail,
   the migration of silver can occur.
   This will cause sometimes a short circuit.

１５． Lot Number Identification

The lot number shall be indicated on the back of the backlight case of each LCD.

１６． Warranty

16-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

16-2. Production Warranty

Kyocera warrants its LCDs for a period of 12 months after receipt by the purchaser, and within the limits specified. Kyocera shall, by mutual agreement, replace or rework defective LCDs that are shown to be Kyocera's responsibility.

１７．Precautions for use

17-1. Installation of the LCD

1. The Metal frame of the LCD module is not grounded. You can use the M2 burring,
   which is located on the right side of the LCD module, for the grounding purpose, if necessary.
2. The LCD shall be installed so that there is no pressure on the LSI chips.
3. The LCD shall be installed flat, without twisting or bending.
4. The display window size should be the same as the effective viewing area.
5. In case you use outside frame of effective viewing area as outward appearance of your product,
   unevenness of its outward appearance is out of guarantee.
6. Please refer to the following our recommendable value of Clamp-down torque when installing.
   Clamp-down torque : 3.3+/-0.5kgf.cm Please set up'SPEED-LOW', 'SOFT START-SLOW' when using
   electric driver.
   Recommendable screw : P-TITE screw two types nominal dia.3.0mm.
   installing boss hole depth : 5.5mm Max.
   Please be careful not to use high torque which may damage LCD module in installation.
7. Do not pull the CFL lead wires and do not bend the root of the wires.
   Housing should be designed to protect CFL lead wires from external stress.
8. This Kyocera LCD module has been specifically designed for use in general electronic devices,
   but not for use in a special environment such as usage in an active gas.
   Hence, when the LCD is supposed to be used in a special environment, evaluate
   the LCD thoroughly beforehand and do not expose the LCD to chemicals such as an active gas.

17-2. Static Electricity

1. Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is
   required. Operation should wear ground straps.

17-3. LCD Operation

1. The LCD shall be operated within the limits specified. Operation at values outside of these
   limits may shorten life, and/or harm display images.
2. Adjust "LCD driving voltage" to obtain optimum viewing angle and contrast.
3. Operation of the LCD at temperature below the limit specified may cause image degradation
   and/or bubbles.
   It may also change the characteristics of the liquid crystal.
   This phenomenon may not recover. The LCD shall be operated within the temperature limits
   specified.

17-4. Storage

1. The LCD shall be stored within the temperature and humidity limits specified.
   Store in a dark area, and protected the LCD from direct sunlight or fluorescent light.
2. Always store the LCD so that it is free from external pressure onto it.
17-5. Screen Surface

1. <u>DO NOT</u> store in a high humidity environment for extended periods.
   Image degradation, bubbles, and/or peeling off of polarizer may result.
2. Do not push or rub the touch panel's surface with hard to sharp objects such as knives,
   or the touch panel may be scratched.
3. When the touch panel is dirty, gently wipe the surface with a soft cloth,
   sometimes moistened by mild detergent or alcohol. If a hazardous chemical is dropped on
   the touch panel by mistake, wipe it off right away to prevent human contact.
4. Touch panel edges are sharp. Handle the touch panel with enough care to prevent cuts.
5. Always keep the LCD free from condensation during testing.
   Condensation may permanently spot or stain the polarizers.

  ＊ Each test item uses a test LCD only once. The tested LCD is not used in any other tests.
  ＊ The LCD is tested in circumstances in which there is no condensation.
  ＊ The tested LCD is inspected after 24 hours of storage at room temperature and room humidity
    after each test is finished.
  ＊ The reliability test is not an out−going inspection.
  ＊ The results of the reliability test are for your reference purpose only.
    The reliability test is conducted only to examine the LCD's capability.

DETAIL C

Note(注記)

	Name(名称)	Explanation(説明)
1	T.P.	Touch panel (タッチパネル)
2	T.P. Active Area (T.P.アクティブエリア)	Operating area of touch panel (タッチパネルの動作範囲)
3	T.P. Viewing Area (T.P.ビューイングエリア)	Warranty area of touch panel's appearance (タッチパネルの外観(傷・異物等)保証範囲)
		By giving pressure between the active area and the effective viewing area of the touch panel, there is a possibility that the touch panel will operate. (タッチパネルアクティブエリアとタッチパネルビューイングエリア間は 荷重をかけた場合は、タッチパネルが動作する可能性があります。)

Precaution in use of touch panel.
(タッチパネル使用上の注意事項)
1. Fix touch panel at LCD module and the rear side of touch panel.
(タッチパネルの固定はLCDモジュール側とタッチパネル裏面とで行なうこと)
2. Must maintain a gap between inside of bezel and touch panel to avoid malfunction or electrode damage of touch panel.
(ベゼル内側とタッチパネルの接触厳禁. 誤動作や電極破損の原因となります。)
3. Please inform us beforehand when you design window of your housing with the different size from recommended size.
(ベゼル開口を推奨寸法以外で製作される場合は必ず前もって相談願います。)

Precaution in use of touch panel.
(タッチパネル使用上の注意事項)
There is vent channel to equalize air pressure between the inner space of the touch panel and the atmosphere.
Please make sure it is not blocked by your housing and mounting method.
(タッチパネルの中には内圧と外圧を均一にするため通気孔を設けています。
取り付け時にこの通気孔を塞がないようにしてください。)

1)Note

Item	Note	
General	1.When defects specified in this Inspection Standards are inspected, operating voltage(Vop) shall be set at the level where optimized contrast is available. Display quality is applied up to effective viewing area. (Bi-Level INSPECTION) 2.This inspection standard about the image quality shall be applied to any defect within the effective viewing area and shall not be applicable to outside of the area. 3.Should any defects which are not specified in this standard happen, additional standard shall be determined by mutual agreement between customer and Kyocera. 4. Inspection conditions Luminance : 500 Lux minimum . Inspection distance : 300 mm (from the sample) Temperature : 25 ± 5 ℃ Direction : right above	
Definition of Inspection item	Pinhole, Bright spot Black spot, Scratch Foreign particle	The color of a small area is different from the remainder. The phenomenon dose not change with voltage.
	Contrast variation	The color of a small area is different from the remainder. The phenomenon changes with voltage.
	Polarizer (Scratch, Bubble, Dent)	Scratch, Bubble and Dent in the polarizer which can be observed in on / off state.
